Build A Neck Jig Ning

The first thing you'll want to do is cut the main board to 16"x24" or whatever size you want the neck jig body to be. I find that to be big enough to jig acoustics, bass, or whatever guitar you want to jig. So after it's cut out you will draw a centerline down the middle of the board which is 8" from the side in this case.

The measurements on the plans for the Neck Router Jig is based for common guitar scales (appr. 24-27"). So if you want to use it for scales above 27" you need probably to increase the length on the frames as the router board. The rest as the e.g. "Profile Tracker" will be the same sizes.

DIY - Plan for Neck Router Jig - Käppi Guitars

If you're building a neck-through or set-neck instrument it's very important to have a detailed cross-sectional drawing or full-size plans for the instrument. The neck angle relative to the instrument's top, and the top's shape or contour along with fingerboard and fret height, must be taken into account and designed to work with the bridge height.

The neck blank is now ready to go on the shaping jig. Here are the neck blanks ready for preliminary shaping. This is the jig used to do the shaping. And here's what it does for me. These are the same neck blanks after shaping. I would say about 85-90% of the shaping is done here. The last 10-15% is always done by hand.

Build a Guitar - Necks, Jigs, Inlay

Can someone enlighten me? In my woeful ignorance, I've been doing fret jobs and setups for over 30 years WITHOUT a neck jig! Despite the fact that I have never had a dissatisfied customer, I have been told that I cannot perform a PERFECT fret job without paying Stew-Mac £230 + postage for four bits of wood, a few screws and a couple of dial gaugesand a further £60 to British Customs ...

Are neck jigs necessary? - FRETS.NET - Ning

with a "proper" neck jig the support rods can simply be slid up into place by hand, you push them up until you see the dial indicators moving and then clamp them down where you think they're "touching" without "pushing"; that can be a little vague sometimes, especially if the padding on the rods is too soft. being able to slowly turn a wingnut ...
