The Singleton design pattern is one of the simplest design patterns. This pattern ensures that the class has only one instance and provides a global point of access to it. The pattern ensures that only one object of a specific class is ever created. All further references to objects of the singleton class refer to the same

These design patterns provides way to create objects while hiding the creation logic, rather than instantiating objects directly using new operator. This gives program more flexibility in deciding which objects need to be created for a given use case. 2: Structural Patterns  
These design patterns concern class and object composition.
