Before calculus was invented, all math was static: It could only help calculate objects that were perfectly still. But the universe is constantly moving and changing. No objects—from the stars in space to subatomic particles or cells in the body—are always at rest.

The branch of mathematics that finds the maximum or minimum values of functions by means of differentiation and integration. Calculus can be used to calculate such things as rates of change, the area bounded by curves, and the volume bounded by surfaces. See more at differentiation, integration.

Introduction to Calculus - MATH

In calculus, the quotient rule is a method of finding the derivative of a function that is the ratio of two differentiable functions. Let $f(x) = g(x)/h(x)$, where both g and h are differentiable and $h(x) \neq 0$. The quotient rule states that the derivative of $f(x)$ is $f'(x) = (g'(x)h(x) - g(x)h'(x))/h(x)^2$.
