Chaos Theory In The Financial Markets

Taking advantage of artificial intelligence and machine learning and using insights of chaos theory and self-similarity (the fractals), the algorithmic system is able to predict behavior of over 10,000 markets. The key principle of the algorithm lays in the fact that a stock's price is a function of many factors interacting non-linearly.

Introduction After the stock market crash of October 19, 1987, interest in nonlinear dynamics, especially deterministic chaotic dynamics, has increased in both the financial press and the academic literature. This has come about because the frequency of large moves in stock markets is greater than would be expected under a normal distribution.

Chaos and Nonlinear Dynamics: Application to Financial ...

At first glance, the markets are quite chaotic, and certainly very complex. This seems to be a great fit for applying chaos theory and figuring out a mathematical model to generate good market picks. Chaos Theory uses cutting-edge science, combined with things like algorithms and artificial intelligence, to generate forecasts. Yet... there isn't a single billionaire who has gotten away with ...
