It explains the background to the Eurocode rules and goes beyond the core topics to cover the design of foundations, retaining walls, water retaining structures. Reinforced Concrete Design to Eurocodes includes more than sixty worked out design examples and over six hundred diagrams, plans and charts. The chapters are fully revised to the Eurocodes and the most commonly encountered design problems in structural concrete are covered.

EuroCode 2 (EC2) deals with the design of concrete structures, which has most recently been covered in the UK by British Standard BS8110 which superseded British Standard CP110 in 1985. Limit state principles established by these British Standards are also adopted by EuroCode 2.

Ribbed slabs are widely used in many countries. This is attributed to the rapid shattering, ease of construction, and the reduction in the time of erection. This type of slabs or flooring system consists of series of small closed spaced reinforced concrete T-beams. These floors are suitable for building with light live loads.
